

This 2-Disc set includes a 27-minute training for a broad range of family-serving professionals. The companion 22-minute presentation, "Infant Crying and Soothing: What You Need to Know to Keep Your Baby Safe," is intended for parents and a variety of child caregivers.

These narrated tools include over 80 referenced slides presented in an attractive, well-organized and clear format. They contain information and key safety messages that parents and caregivers need to know and that family-serving professionals can teach and reinforce with the families they serve. For example:

- Shaken Baby Syndrome and its consequences
- Why shaking/slamming is damaging to infants and young children
- How many children are reported yet how many are actually affected
- Adult factors that might lead to shaking
- The latest information on infant crying and how much is normal
- Infant soothing techniques that parents should learn about and try
- What caregivers can do when infant soothing doesn't always work
- How to make safe choices when leaving children with others

"As a mother whose seven-month-old daughter was a victim of Shaken Baby Syndrome at the hands of an adult babysitter, I can only say that this training contains vital information that everyone must know. Hopefully, by educating parents, caregivers and professionals everywhere, other children will not fall victim to this preventable tragedy."

Paula Cashin, Mother of Laura
